NAES Signs On as Operator of EnerTech's SlurryCarb™ Facility in Rialto, California

ATLANTA, GEORGIA (September 6, 2006) – EnerTech Environmental announced today that it has signed an Operations and Maintenance Agreement with North American Energy Services (NAES) for the operation of the company's upcoming Rialto SlurryCarb™ facility.

NAES, a subsidiary of Itochu, is the largest independent provider of third party operations and maintenance (O&M) services to the power generation industry, with an experience base of more than 23,000 MW of generation capacity in a wide range of technologies, fuels, locations, customers and modes of operation. NAES also offers specialized support services that are tailored to meet plant-specific needs.

"We are excited to team with EnerTech on their Rialto project," said Glen Canavera of NAES. "EnerTech's SlurryCarb™ technology offers an exciting new opportunity for renewable energy generation and we are pleased to be part of this project."

EnerTech's SlurryCarb™ process economically produces a renewable fuel from biosolids and other high-moisture wastes. The Rialto SlurryCarb™ facility, scheduled to commence operations in early 2008, will convert 675 wet tons per day of biosolids from five municipalities in the Los Angeles region into approximately 140 tons per day of renewable fuel. The renewable fuel, called E-Fuel, will be used by a local cement kiln as an alternative to coal. The Company has recently announced that the facility's customers include the Orange County Sanitation District, the Sanitation Districts of Los Angeles County, the City of Riverside, the City of San Bernardino Municipal Water Department, and the City of Rialto.

About EnerTech Environmental

EnerTech Environmental, Inc., is a renewable energy company dedicated to the protection of public health and the environment. The company provides answers to the problems of traditional waste management methods and simultaneously creates renewable energy – in a way that makes economic sense. EnerTech's patented SlurryCarb™ process cleanly and economically converts biosolids (sewage sludge) and other high moisture wastes into a high-grade, renewable fuel, with significant cost savings over alternative methods. EnerTech's corporate headquarters are located in Atlanta, Georgia.
