## **EnerTech Environmental's Renewable Energy Facility in Southern California Begins Start-up**

**ATLANTA, GEORGIA (October 22, 2008)** – EnerTech Environmental, Inc. announced today that the Rialto Regional Biosolids Processing Facility (Rialto Facility) in Rialto, California, completed the first phase of mechanical testing this month and began initial start-up by accepting its first truckload of biosolids (sewage sludge). The event was observed by representatives for the five municipalities currently providing biosolids to the facility.

“We welcome this venture to the City,” said Winnie Hanson, Mayor Pro Tem for the City of Rialto. “The City of Rialto is proud to be partnered with EnerTech and a part of this renewable energy initiative.”

“The first truckload of biosolids at the facility is a huge milestone for EnerTech and our partners,” said Kevin Bolin, EnerTech CEO. “We have worked for years to realize this moment and the cooperation and tenacity of this team of people—all focused on the goal of creating a renewable energy alternative in California—has been essential to setting the groundwork for this moment.”

**Rialto Regional Biosolids Processing Facility,  
October 17, 2008**

Once operational, the Rialto Facility will utilize EnerTech's patented SlurryCarb™ technology to convert biosolids from Southern California into approximately 170 tons per day of renewable fuel. The renewable fuel, called E-Fuel, will be utilized as a renewable coal supplement at local cement kilns. The use of E-Fuel will offset over 85,000 tons of carbon dioxide emissions per year in Southern California.

The Rialto Facility will convert over 240,000 wet tons of biosolids to renewable fuel annually and is expected to be fully operational spring of 2009.

### **About the Rialto Regional Biosolids Processing Facility**

Located in Rialto, California, The Rialto Regional Biosolids Processing Facility is contracted to convert approximately 700 wet tons per day of biosolids from five municipalities in the Los Angeles region into approximately 170 tons per day of renewable fuel. The renewable fuel, called E-Fuel, will be used by a local cement kiln as an alternative to coal. The facility's customers include the Orange County Sanitation District, the Sanitation Districts of Los Angeles County, the City of Riverside, the City of San Bernardino Municipal Water Department, and the City of Rialto.

**About EnerTech Environmental, Inc.**

EnerTech Environmental, Inc. is a renewable energy company dedicated to the protection of public health and the environment. The company provides answers to the problems of traditional waste management methods and simultaneously creates renewable energy – in a way that makes economic sense. EnerTech’s patented SlurryCarb™ process cleanly and economically converts biosolids (sewage sludge) and other high moisture wastes into a high-grade, renewable fuel, with significant cost savings over alternative methods. EnerTech’s corporate headquarters are located in Atlanta, Georgia.
