ENERTECH RECEIVES \$1 MILLION FROM SOCALGAS FOR ACHIEVING ADVANCED ENERGY SAVINGS

ATLANTA, GEORGIA (April 29, 2009) – Proving that energy efficiency can result in significant savings, EnerTech Environmental’s SlurryCarb™ facility in Rialto, California, received yesterday a \$1 million incentive check from Southern California Gas Co. (SoCalGas) for its initiative to conserve energy and protect the environment. The facility is projected to save in excess of 3 million therms annually as a result of participating in the SoCalGas Savings by Design program.

Savings by Design provides technical and financial resources to help commercial and industrial customers save energy and money when they design, expand, or change new or existing processes and facilities. The five processes that were optimized at the Rialto facility included an anaerobic digester, heat transfer fluid system, heat exchanger, thermal oxidizer, and dryer.

“We congratulate EnerTech for recognizing the many benefits of energy efficiency and actively encourage other businesses to do the same,” said Mark Gaines, director of customer programs at SoCalGas. “We give our customers millions of dollars in rebates and incentives each year to help them save energy.”

The Rialto facility is EnerTech’s first commercial biosolids-to-renewable energy facility. The facility converts biosolids (processed sewage sludge) from the Southern California area into a renewable fuel. Biosolids are a common and easily renewable waste that all communities produce and must manage. In the United States alone, over 7 million tons of biosolids are produced each year.

EnerTech’s facility is providing a long-term biosolids recycling plan for five Southern California municipalities. Customers include Orange County Sanitation District, The County Sanitation Districts of Los Angeles County, and the cities of Rialto, Riverside, and San Bernardino. By transforming biosolids from a waste product into a fuel source, the Rialto facility will generate over 60,000 tons of renewable fuel, called E-Fuel, annually. That fuel will be used by local Southern California cement kilns to offset their coal use and reduce annual local greenhouse gas emissions by over 80,000 tons.

About EnerTech Environmental

EnerTech Environmental, Inc. is a renewable energy company dedicated to protecting public health and the environment. The company provides answers to the problems of traditional waste management methods and simultaneously creates renewable energy – in a way that makes economic sense. EnerTech’s patented SlurryCarb™ process cleanly and economically converts biosolids and other high moisture wastes into a high-grade, renewable fuel, with significant cost savings over alternative methods. EnerTech’s corporate headquarters are located in Atlanta, Georgia. For more information, please visit www.enertech.com.

About Southern California Gas Co.

Southern California Gas Co. has been delivering clean, safe and reliable natural gas to its customers for more than 140 years. It is the nation's largest natural gas distribution utility, providing safe and reliable energy to 20.5 million consumers through 5.7 million meters in more than 500 communities. The company's service territory encompasses approximately 20,000 square miles in diverse terrain throughout Central and Southern California, from Visalia to the Mexican border. Southern California Gas Co. is a regulated subsidiary of Sempra Energy (NYSE: SRE). Sempra Energy, based in San Diego, is a Fortune 500 energy services holding company. For more information on energy efficiency programs, visit www.socalgas.com/energyefficiency, or call (213) 244-3350.

All energy-efficiency rebates and incentives from Southern California Gas Co. are subject to change without notice and will be offered on a first-come, first-served basis as long as funding is available. These programs are funded by California utility customers and administered by Southern California Gas Co. under the auspices of the California Public Utilities Commission.
